## APPENDIX 1 <br> Performance against Treasury Management Indicators agreed in Treasury Management Strategy Statement

## 1. Authorised limit for external debt

These limits include current commitments and proposals in the budget report for capital expenditure, plus additional headroom over \& above the operational limit for unusual cash movements.

|  | 2009/10 <br> Prudential <br> Indicator | 2009/10 Actual <br> as at 31 <br> st <br> 2010 |
| :--- | :---: | :---: |
|  | $£^{\prime} 000$ | $£^{\prime} 000$ |
| Borrowing | 85,000 | 80,000 |
| Other long term liabilities | 2,000 | 0 |
| Cumulative Total | $\mathbf{8 7 , 0 0 0}$ | $\mathbf{8 0 , 0 0 0}$ |

## 2. Operational limit for external debt

The operational boundary for external debt is based on the same estimates as the authorised limit but without the additional headroom for unusual cash movements.

3. Upper limit for fixed interest rate exposure

This is the maximum \% of total borrowing which can be at fixed interest rate.

|  | $2009 / 10$ <br> Prudential <br> Indicator | 2009/10 Actual <br> as at 31 <br> st <br> 2010 |

* The £20m of LOBO’s are quoted as variable rate in this analysis as the Lender has the option to change the rate at 6 monthly intervals (the Council has the option to repay the loan should the rate increase)

4. Upper limit for variable interest rate exposure

While fixed rate borrowing contributes significantly to reducing uncertainty surrounding interest rate changes, the pursuit of optimum performance levels may justify keeping a degree of flexibility through the use of variable interest rates. This is the maximum \% of total borrowing which can be at variable interest rates.

- All LOBO's (Lender Option / Borrower Option) have reached the end of their fixed interest period and have reverted to the variable rate of $4.5 \%$. The lender has the option to change the interest rate at 6 monthly intervals, however at this point the borrower also has the option to repay the loan without penalty.

## APPENDIX 5

## Annual Review 2009/10 - (provided by Sterling Treasury Advisors)

By the start of the financial year in April 2009, UK GDP had already contracted approximately $5.3 \%$, due to a sharp fall in private sector spending. The financial crisis in late 2008 had prompted the Government to implement of a number of extraordinary government measures, including capital injections in some banks and the Credit Guarantee Scheme, to keep the banking system afloat amidst a wave of mistrust in financial markets.

In an attempt to avoid a more severe recession and possible deflation, the Bank of England had cut Bank Rate to $0.5 \%$ in March, where it remained for the whole year. To further loosen monetary policy, the Bank initiated a policy of quantitative easing. By using newly-created central bank reserves to purchase £200bn of government and commercial financial assets, policymakers hoped to stimulate spending and economic activity.
As the financial year progressed and the effects of fiscal and monetary stimulus were more widely felt, the pace of economic contraction gradually declined. House prices recovered following the $20 \%$ fall from the 2007 peak and the rate of unemployment slowed. As a consequence, consumer confidence started to recover. However, despite improving business survey evidence, the UK economy continued to contract until quarter four.

Confidence in the financial sector improved in line with better company results, buoyed by higher trading revenues as sentiment improved and credit markets thawed. However, asset impairments continued at elevated levels, and led to losses being reported by some banks. In Europe the European Commission penalised banks that had needed state aid. Some other banks, particularly in the US, repaid government funds.

As a consequence of the recession and the various fiscal stimulus packages, UK Government borrowing soared. By the end of year, the national debt had reached £890bn ( $62 \%$ of GDP) and the annual fiscal deficit was estimated to be $£ 167 \mathrm{bn}$.

The prevailing Bank of England outlook at the end of the year saw the UK economy undergoing anaemic recovery, as weak domestic demand persisted into the medium term. Elevated spare capacity is expected to reduce inflationary pressure, giving the Bank flexibility to maintain loose monetary policy. This could prove useful because the UK and other national governments are under intense pressure to engage in fiscal consolidation, cutting spending and raising taxes in order to control debt levels. Although fears of a double-dip recession may eventually prove unfounded, austerity measures introduced by national governments will weigh on future economic activity.
