

APPENDIX 1

Performance against Treasury Management Indicators agreed in Treasury Management Strategy Statement

1. Authorised limit for external debt

These limits include current commitments and proposals in the budget report for capital expenditure, plus additional headroom over & above the operational limit for unusual cash movements.

	2010/11 Prudential Indicator	2010/11 Actual as at 31st Mar 2011
	£'000	£'000
Borrowing	115,000	90,000
Other long term liabilities	3,000	0
Cumulative Total	118,000	90,000

2. Operational limit for external debt

The operational boundary for external debt is based on the same estimates as the authorised limit but without the additional headroom for unusual cash movements.

	£'000	£'000

3. Upper limit for fixed interest rate exposure

This is the maximum amount of total borrowing which can be at fixed interest rate, less any investments for a period greater than 12 months which has a fixed interest rate.

	2010/11 Prudential Indicator	2010/11 Actual as at 31st Mar 2011
	£'000	£'000

* The £20m of LOBO's are quoted as variable rate in this analysis as the Lender has the option to change the rate at 6 monthly intervals (the Council has the option to repay the loan should the rate increase)

4. Upper limit for variable interest rate exposure

While fixed rate borrowing contributes significantly to reducing uncertainty surrounding interest rate changes, the pursuit of optimum performance levels may justify keeping flexibility through the use of variable interest rates. This is the maximum amount of total borrowing which can be at variable interest rates less any investments at variable interest rates (this includes any investments that have a fixed rate for less than 12 months).

	2010/11 Prudential Indicator	2010/11 Actual as at 31st Mar 2011

APPENDIX 5

Annual Review 2010/11 – (provided by Sterling Treasury Advisors)

Following recession in 2009, global economic activity rebounded in 2010. Traditional exporters like Germany benefited from rising consumer demand worldwide, although economies more reliant on domestic consumption, including the UK, faced a weaker outlook. The government and household sectors of these countries were burdened by excessive debt, ultimately resulting in weaker domestic spending.

The absence of a quick economic recovery led to rising government budget deficits, especially in the European periphery, and prompted some concern among bond investors and credit rating agencies. This loss of confidence in the ability of some governments to repay their debts saw bond yields rise and the markets effectively closed to certain countries. Greece, Ireland and Portugal were all forced to seek financial assistance from the European Union and the International Monetary Fund.

The UK's deteriorating financial position was also a concern. The UK had the highest budget deficit in the EU in 2009/10 and the economic outlook was weak. However, the new Conservative-Liberal Democrat coalition government, formed following the inconclusive General Election in May 2010, outlined what was perceived by investors and credit rating agencies to be a credible fiscal consolidation plan. With financial problems continuing elsewhere in Europe, the UK was perceived to be a relative "safe haven", and strong appetite for UK government debt kept gilt yields low.

While the UK government focused on tightening fiscal policy, the Bank of England maintained loose monetary policy. Bank Rate remained at 0.5% throughout the financial year, despite inflation rising to over double the 2% target as the price of raw materials increased. With inflation expected to test 5% during 2011, heightening the risk that raised inflation expectations would feed into wages and prices, three members of the Monetary Policy Committee voted for a rise in Bank Rate in February. The remaining six members, however, were more concerned that higher interest rates could choke off the economic recovery, which was already showing signs of slowing in response to fiscal tightening. The MPC remains divided on when to raise Bank Rate.
